

Laboratory Sheet 4 – AJAX and JSON

template.html ↔ server.js

1. Continue with your CV webpage from previous labs. Create a text file on the server's filesystem with a cover letter for your job applications
2. Add a button to the CV webpage, reading "Show Cover Letter"
3. When the user clicks that button, append the content of the text file to the page via AJAX
4. Make your Education information also only be fetched and displayed after the user clicks a button "Show Education"
 - a. Read this information from the Database.
 - b. Convert it into a JSON object before sending it to the client
 - c. On the client side, parse the Education JSON object into your HTML
