

## **Laboratory Sheet 1 – Diagnostic Exercise**

### ***CV.html***

To showcase your current skill level with front-end development, create a webpage (.html) with your Curriculum Vitae.

To read an .html file hosted on your computer, just double click on it and the Browser should open it.

Try to make the webpage as visually appealing and interactive as possible – you are welcome to use any libraries or frameworks you might know.

The purpose is to show the lecturer your current knowledge, so make sure to demonstrate your work before you leave the lab.

If you are in a room with a teaching assistant, please ask to call the lecturer, who should be in the next room.
